## THE **GROUP.**

The future will not be built by a single product or a single company.

It will be built by connected systems, technology that enables people, education that expands opportunity, information that keeps people informed, and creative work that makes ideas easier to understand and experience.

**Tecrozon Group brings these areas together through a growing portfolio of companies and products.**

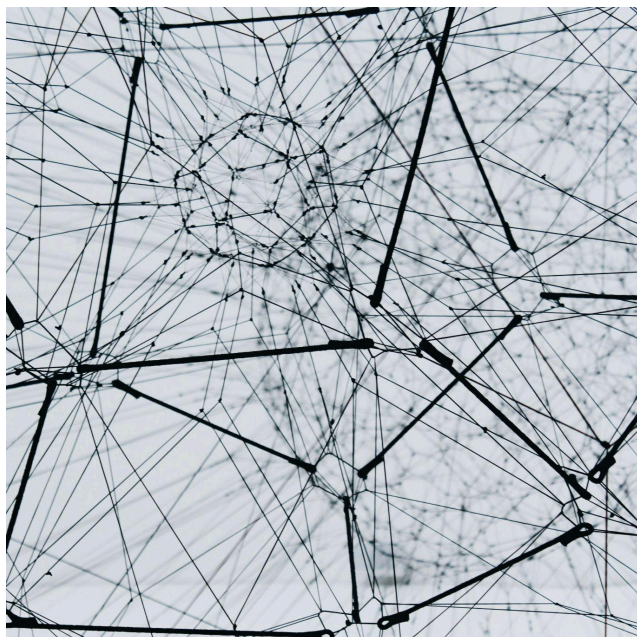

---

“

True innovation occurs when we stop building isolated tools and start engineering unified ecosystems.

CHRIS AKAMPA SIRMUEL, *Founder.*

”

## OUR ECOSYSTEM .

Tecrozon Group operates through a portfolio of businesses with distinct roles across technology, media, education and creative services.

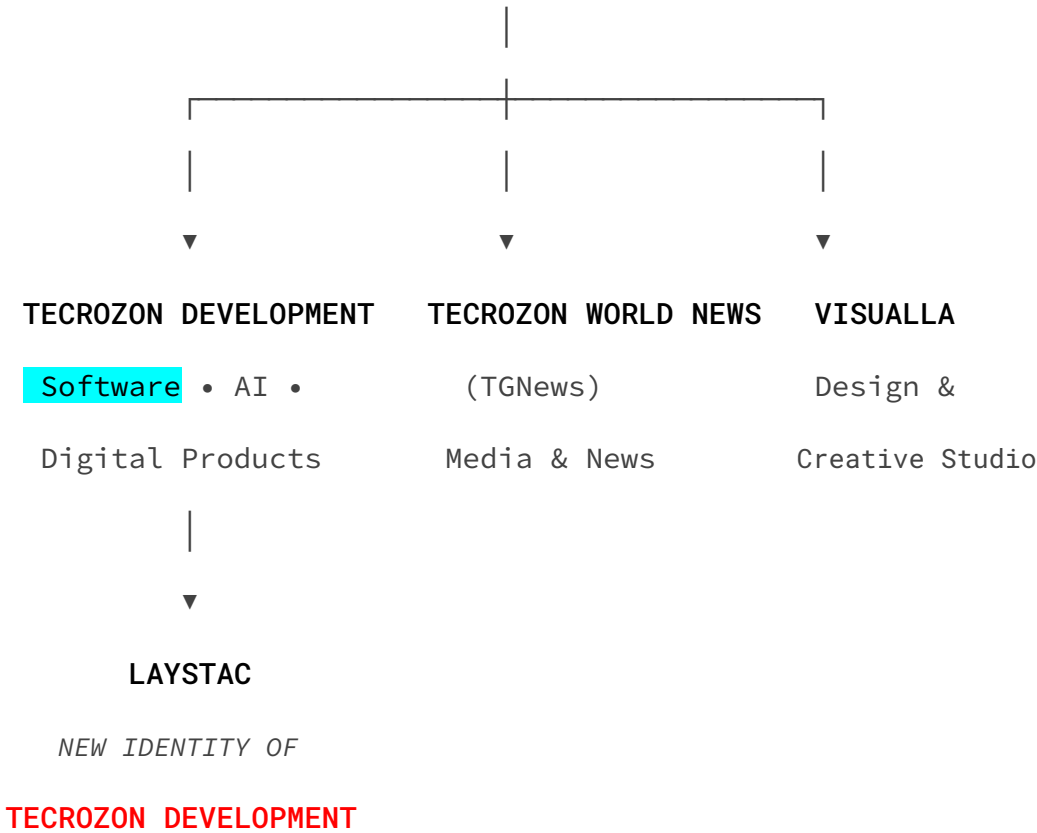

At the center is a shared philosophy.

Independent companies. Connected capabilities. Long term impact.

### TECROZON GLOBAL GOALS

*Social Impact /*

*Charitable Initiative*

*within the Tecrozon ecosystem.*

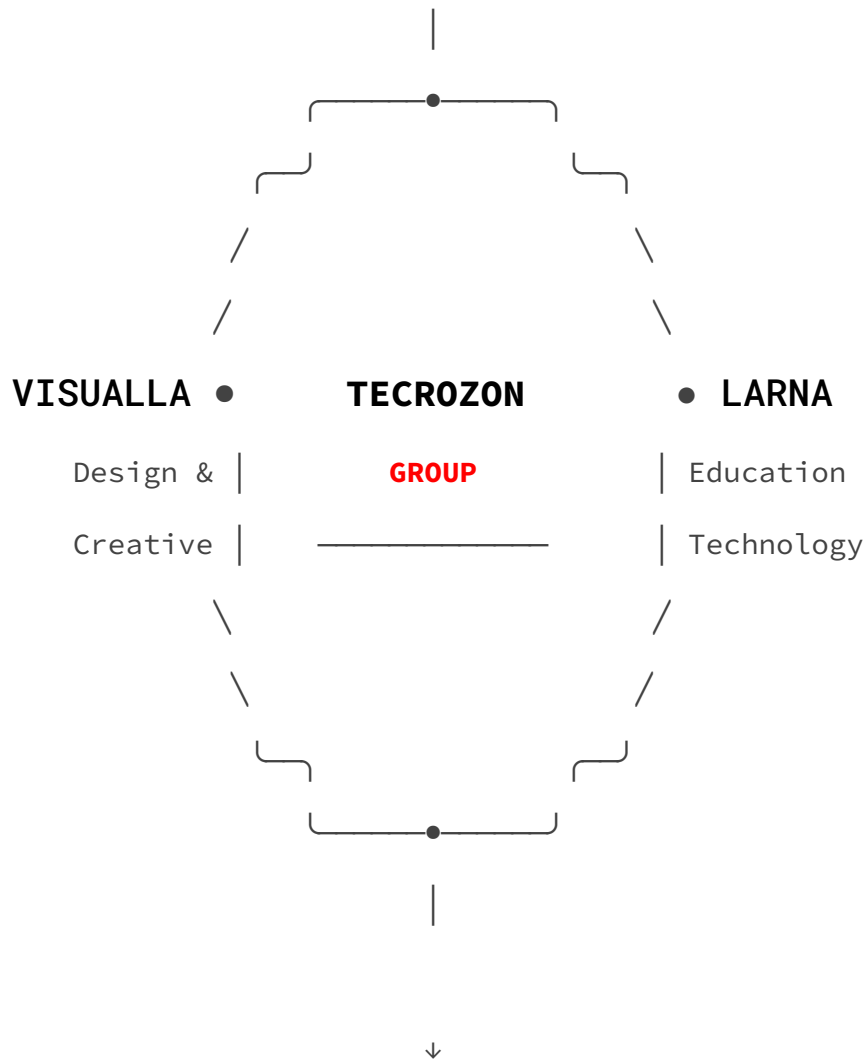

A reminder that the future we want does not simply arrive; it is shaped by **what we choose to build, support and share today.**

Through Tecrozon Global Goals, we are committed to using our resources, technology and growing ecosystem to create opportunities that reach beyond business.

# LAYSTAC

## Technology & Software

### TECROZON GLOBAL GOALS

Social Impact

**TECROZON GROUP** connects the companies, provides direction and builds for the long term together, these companies form an ecosystem where capabilities can move across boundaries.

# PRIVACY & TRUST.

Privacy is fundamental to how we build and operate. Across the Tecrozon ecosystem, we are committed to handling information responsibly, protecting the data entrusted to our companies and products, and building systems with privacy and security considered from the beginning. We aim to collect and use information only when it is necessary to provide, maintain, secure or improve our services, while maintaining clear boundaries around how that information is handled. Our products and infrastructure are designed with appropriate security measures, controlled access and responsible data practices, with consideration given to how information is collected, processed, stored and eventually removed. Where our products rely on external services or technology partners, we work to ensure that access to information remains limited to what is necessary for the intended purpose. As our companies and products continue to grow, our commitment remains the same: to build technology that people and organizations can trust, while treating privacy, security and responsible data handling as essential parts of the systems we create.

**Private by design. Secure by default. Built for trust.**
